Professional Summary

Motivated and self-driven undergraduate student pursuing a Bachelor's degree in Artificial Intelligence at the University of Management & Technology (UMT), Lahore. Currently developing practical skills across Python, Machine Learning, Deep Learning, Natural Language Processing and Generative AI. Experienced in academic AI and software projects, with growing interest in Retrieval-Augmented Generation (RAG), data-driven applications and practical AI systems. Passionate about learning new technologies and developing innovative solutions to real-world problems.

Experience

University Labs — Sep 2023 – Present

- Built multiple academic projects using Python and C++, applying programming, data structures and algorithms concepts.
- Worked collaboratively in team projects, improving communication, problem-solving and coding skills.
- Developed beginner-level Flutter applications as part of course assignments and personal learning.
- Practiced Machine Learning workflows including data preprocessing, TF-IDF, classification and similarity-based methods.
- Studied and practiced Deep Learning concepts including Artificial Neural Networks (ANN), RNN, LSTM and Bi-LSTM.
- Worked with Natural Language Processing concepts including preprocessing, TF-IDF/IDF, stemming, lemmatization, statistical language models, information retrieval and text similarity.
- Explored Generative AI and Retrieval-Augmented Generation (RAG) through academic learning and the Ikrambot personal-data project.

Technical Skills

Languages: Python, C++, Dart, SQL

Machine Learning: TF-IDF, LinearSVC, LabelEncoder, Cosine Similarity, Naive Bayes, Decision Trees, Linear Regression, XGBoost

Deep Learning: Artificial Neural Networks (ANN), RNN, LSTM, Bi-LSTM, Temporal Fusion Transformer (TFT)

NLP: Text Preprocessing, Tokenization, Stopword Handling, Negation Handling, Stemming, Lemmatization, TF-IDF/IDF, Statistical Language Models, Information Retrieval, Text Similarity, Generative AI, RAG

Data & Scientific Computing: NumPy, Pandas, Matplotlib, FastF1

Frameworks / Platforms: Streamlit, Flutter (basic), Kaggle Notebook, Google Colab, Jupyter Notebook

Data / AI Systems: Kafka, Flink, Kappa Architecture, TimeSHAP, SMOTE

Document Processing: pdfminer, docx2txt

Tools: VS Code, Anaconda, MySQL, Android Studio, FlutLab, Code::Blocks

Embedded / Hardware: Arduino, ESP32, ESP32-CAM, sensors, GPS, Bluetooth, motor-control hardware, RTL-SDR

Projects

AI-Powered Resume Screening System

- Machine Learning semester project for automated resume screening and job-description matching.
- Used TF-IDF with n-grams, LinearSVC and LabelEncoder for resume classification.
- Applied cosine similarity to compare resumes with a job description.
- Integrated PDF/DOCX processing, Streamlit interface and Gmail-based resume handling.

Real-Time Data Warehouse Architectures for Predictive Analytics in Formula 1

- Worked with FastF1 race data and predictive analytics concepts.
- Explored XGBoost, Bi-LSTM and Temporal Fusion Transformer (TFT).
- Studied Kafka, Flink and Kappa architecture for real-time data workflows.
- Worked with lap time, tyre compound, tyre life and race position features.

Online Event Management & Ticket Booking System

- Built as a Software Engineering semester project.
- Included SRS documentation, use case diagrams, class diagrams and sequence diagrams.
- Focused on user-friendly interfaces and event workflows.

eCommerce Inventory Management System / DSA Projects

- Implemented arrays, linked lists, stacks and queues in C++.
- Built lab-based mini-projects demonstrating theoretical knowledge through practical code.

NLP / Amazon Reviews Coursework

- Worked with an Amazon Reviews dataset in Kaggle Notebook for NLP preprocessing and analysis.
- Practiced tokenization, cleaning, negation handling, stemming, lemmatization, TF-IDF/IDF and statistical language-model concepts.
- Studied information retrieval, text similarity, Naive Bayes and confusion-matrix evaluation.

Education

BS in Artificial Intelligence

University of Management & Technology (UMT), Lahore

Expected Graduation: July 2027

Current academic context: 7th-semester
